

Figure 1. Comparison of forearm venous distensibility in patients with functional and non-functional AVF. Data are presented as individual values and mean; **: $p=0.003$.

Figure 1. Individual data of area under the dose-response curve and absolute increase of forearm blood flow (dFBF) during Metacholin (MCh) and Sodium Nitroprusside (SNP) infusions. Arrows indicate data of patients with early fistula failure.

Figure 1. Study design

Figure 2. Study A. Graft survival with non-predicted thrombosis.

Figure 3. Study B. Graft survival with non-predicted thrombosis.

Figure 1. Qa results within one week after PTA in A.) AVG and B.) AVF (both $P < 0.0001$)
