Except as permitted by the applicable copyright law, you may not reproduce or make this material available to any third party without the prior written permission from the copyright holder(s). Copyright law allows the following uses of this material without prior permission:

- you may download, save and print a copy of this material for your personal use only;
- you may share the EUR portal link to this material.

In case the material is published with an open access license (e.g. a Creative Commons (CC) license), other uses may be allowed. Please check the terms and conditions of the specific license.

Take-down policy

If you believe that this material infringes your copyright and/or any other intellectual property rights, you may request its removal by contacting us at the following email address: openaccess.library@eur.nl. Please provide us with all the relevant information, including the reasons why you believe any of your rights have been infringed. In case of a legitimate complaint, we will make the material inaccessible and/or remove it from the website.

Propositions accompanying the thesis

Clinical studies in advanced chronic liver disease

1. In candidate patients for liver transplantation, the yield of screening colonoscopy is relatively low and the procedure is associated with an increased risk for complications. Therefore, alternative screening strategies should be considered. (this thesis)
2. Transjugular intrahepatic portosystemic stent placement provides long-term control of bleeding in the majority of patients with ectopic variceal bleeding. (this thesis)
3. Bacterascites is a complication of advanced chronic liver disease comparable to spontaneous bacterial peritonitis with respect to clinical background and prognosis, and persists or evolves into spontaneous bacterial peritonitis in a substantial proportion of cases without antibiotic treatment. (this thesis)
4. The main reason for dropout from the liver transplantation waiting list is infection. (this thesis)
5. Future studies should investigate whether nutritional interventions can influence clinical outcome in pre-liver transplantation patients. (this thesis)
6. The gut feeling seems to have a scientific rather than a spiritual rationale. (Chu, Nature 2019)
7. Sex matters in liver transplantation. (Sarkar, Journal of Hepatology 2015)
8. The majority of patients with cirrhosis perceive stigma related to their disease and this may have deleterious consequences. (Vaughn-Sandler, Digestive Diseases and Sciences 2015)
9. Approximately 20% of the global cancer incidence is initiated or promoted by infectious events. (zur Hausen, Infections causing human cancer 2008)
10. You could spend the entire national income on healthcare and everybody still dies. (Marsh, Financial Times 2017)
11. Medical science has made such tremendous progress that there is hardly a healthy human left. (A. Huxley)
